FILTRON[®]

AIR FILTERS

The air filter stops impurities from the air sucked in by the engine and helps maintain the appropriate engine power, torque, and low fuel consumption. If not for the filter, polluted air - full of pollen and street dust - would go straight into the combustion chamber. Engine impurities act like abrasive paper and cause damage to piston rings, bushes, and cylinders.

WHAT DISTINGUISHES FILTRON AIR FILTERS?

FILTER MEDIUM RESISTANT TO THE SPREAD OF FLAMES

All FILTRON air filters possess filter media which, according to the F1 or S1 flammability class, do not let fire spread (by causing flames to self-extinguish) and can protect passengers from a possible fire if a ignition source enters into the air supply system.

MODERN FILTER MATERIALS

FILTRON air filters use modern filter materials produced on the basis of cellulose fibres or synthetic fibres. These materials ensure a filtration efficiency of 99.9% for particles as small as a few microns in size.

DURABLE AND AIRTIGHT FILTERS SEALS

For the production of air filter gaskets, we use a unique polyurethane mixture that is distinguished by its elasticity and resistance to compression at extremely high temperatures. Thanks to the unique properties of our seals, FILTRON air filters maintain the tightness of the housing even in very difficult operating conditions.

PLEATS STABILISED BY RIBS

FILTRON air filter pleats are stabilised by means of special ribbing which prevents the adherence of adjacent pleats. Thanks to the uniform distribution of pleats, the filtration process takes place over the entire surface of the filter media, which results in the full utilisation of the engine's power.

ORIGINAL EQUIPMENT SUPPLIER'S EXPERTISE

The high quality of FILTRON products results from the broad expertise of MANN+HUMMEL – our company is the leading supplier of original filters for the largest car manufacturers in the world. MANN+HUMMEL is the world leader in filtration technology.

FILTRON®

OIL FILTERS

The oil filter stops impurities in the oil which are passed on from the combustion chamber and are created during the friction of the engine parts that are working together. If not for the filter, the contaminated oil would increase the wear of the moving parts, which would directly increase the risk of engine damage.

WHAT DISTINGUISHES FILTRON OIL FILTERS?

TOP QUALITY MATERIALS

The quality of our materials is laboratory-controlled, which lets us ensure that both the filter medium and the valves, springs, housings and other filter elements meet their requirements, even in the most difficult operating conditions.

PRECISE VALVES TAILORED TO REQUIREMENTS

In spin-on oil filters with valves, it is important that the design and properties of the valves match the requirements of the engine or vehicle manufacturer. The valves in FILTRON oil filters are designed according to the individual requirements so that the filter always functions properly in the oil system.

VERIFIED TIGHTNESS

During the production process, we carry out a number of tightness tests on oil filters which have a housing. Tests are carried out using modern and automated measuring machines. When buying a FILTRON oil filter, you can be sure that it is resistant to oil leakage.

THE USE OF MODERN PLASTICS

Replacing metal elements of the oil filter with plastic elements is a common trend in the filter industry. This facilitates the utilisation of the filter and reduces its mass. The plastics we use are thoroughly laboratory tested, therefore their quality always meets any stringent requirements.

ORIGINAL EQUIPMENT SUPPLIER'S EXPERTISE

The high quality of FILTRON products results from the broad expertise of MANN+HUMMEL – our company is the leading supplier of original filters for the largest car manufacturers in the world. MANN+HUMMEL is the world leader in filtration technology.

FILTRON®

FUEL FILTERS

The fuel filter stops contaminants found in fuel which can include rust, metal chips, dust, and other solid particles. The effects of inadequate fuel filtration can be:

- * a significant decrease in engine power
- * the disturbance or interruption of the fuel supply
- * damage to fuel-system components

WHAT DISTINGUISHES FILTRON FUEL FILTERS?

PRECISE AND EFFECTIVE FILTRATION

FILTRON fuel filters effectively stop the finest impurities, which are several dozen times smaller than grains of sand. The high quality of FILTRON filters stems from our expertise and modern production standards.

FILTER MEDIA TAILORED TO THE ENGINE'S REQUIREMENTS

FILTRON fuel filters include highly-effective filter media tailored to the requirements of the engine or vehicle manufacturer. The effectiveness and properties of our filter media are tested in a modern laboratory, where we perform about 4000 tests annually.

PROTECTION OF MODERN INJECTION SYSTEMS

Injection systems used in diesel engines require extremely efficient filtration and water separation. FILTRON offers a wide range of fuel filters for vehicles with advanced injection systems. These filters meet the most stringent requirements thanks to the use of advanced technological solutions such as multi-stage water separation.

INSTALLATION MANUAL INCLUDED WITH SELECTED FILTERS

FILTRON's sophisticated fuel filters come with an accurate, illustrated installation manual for replacing filters. All manuals can also be found on our website.

ORIGINAL EQUIPMENT SUPPLIER'S EXPERTISE

The high quality of FILTRON products results from the broad expertise of MANN+HUMMEL – our company is the leading supplier of original filters for the largest car manufacturers in the world. MANN+HUMMEL is the world leader in filtration technology.

FILTRON[®]

CABIN FILTERS WITH THE INNOVATIVE PROTECT + TECHNOLOGY

3 LEVELS OF PROTECTION IN FILTRON CABIN FILTERS

FILTRATION MEDIUM

Made of synthetic non-woven fabric with electrostatic properties

- * ensures the filtration of pollen, soot, and solid particles, as small as a few micrometer
- * protects passengers from the inhalation of harmful solid pollutants

PROTECT + TECHNOLOGY

PROTECT + is a microparticle coating visible in laboratory conditions, used in every FILTRON cabin filter

- * reduces the risk of allergic reactions (reduces allergens and prevents the growth of bacteria and mould on the filter)
- * improves travel comfort and safety

ACTIVATED CARBON

The activated-carbon layer is placed between the two layers of filtration medium

- * blocks harmful gases, such as ozone, sulphur dioxide, and nitrogen oxides
- * reduces odours

PROTECT+
TECHNOLOGY

ALLERGENS

BACTERIA
